

About Project

Project Title : Course Selection Portal

Group : 2

Project Description :

- What does this program do ?

The Course Selection Portal is an online resource for a Self-financing multi-disciplinary university (SFMDU) and students looking for their programme of study.

- Why our group uses the technologies used

We use web applications because the technology is being used nowadays and more suitable for the university instead of using other technology like mobile apps or keeping the program as apk. The system looks more formal to us.

- Some of the challenges my team faced and features we hope to implement in The future

Challenges : We were having problems in connecting the program to the databases since we are not good at creating databases (mysql).

Features hoped to be implemented : Payment, data redundant checker, authentication for applied course and user friendliness.

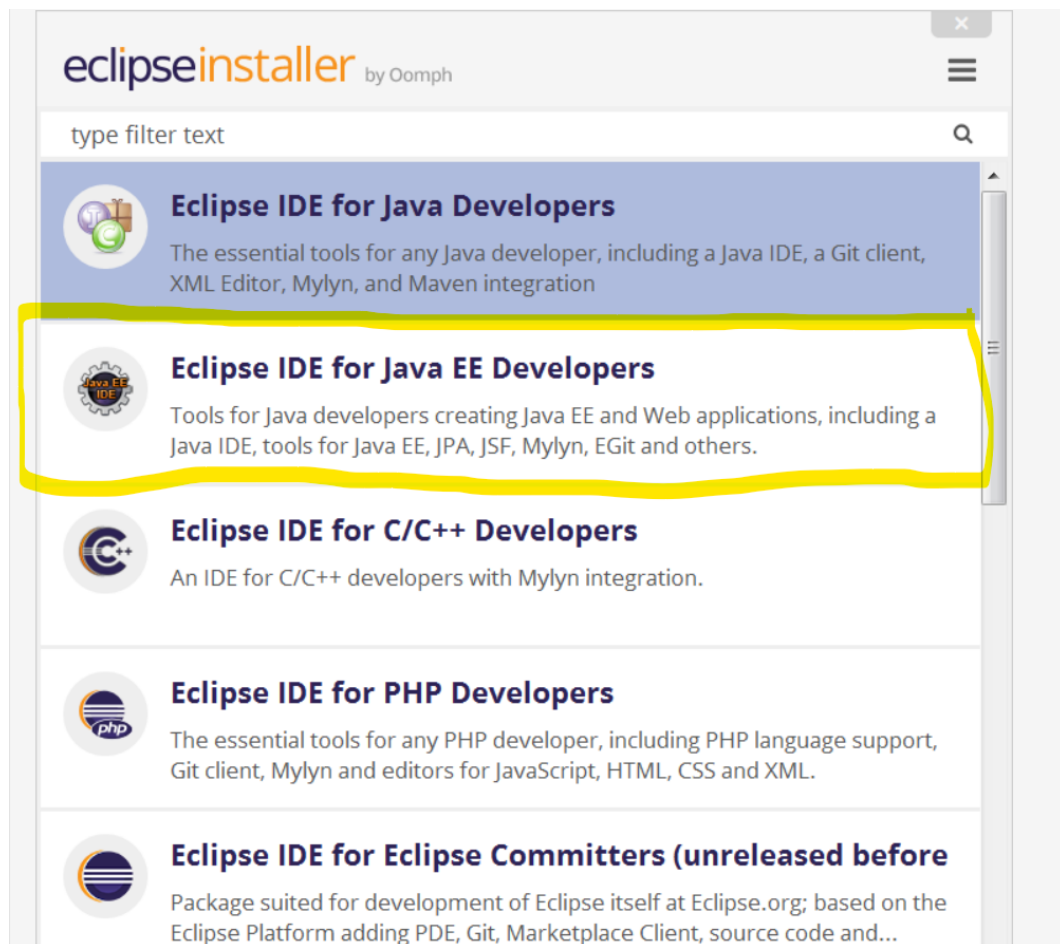

Download Requirements

To run this program , you need to download and install the softwares/files below :

1. Eclipse IDE <https://www.eclipse.org/downloads/packages/installer>

Make sure to choose yellow line option in the picture below

When install this software :

2. Mysql 8.0.31 <https://downloads.mysql.com/archives/installer/>
3. Apache-tomcat-9.0.69 <https://tomcat.apache.org/download-90.cgi>

How to run the program

To run this program, follow these steps :

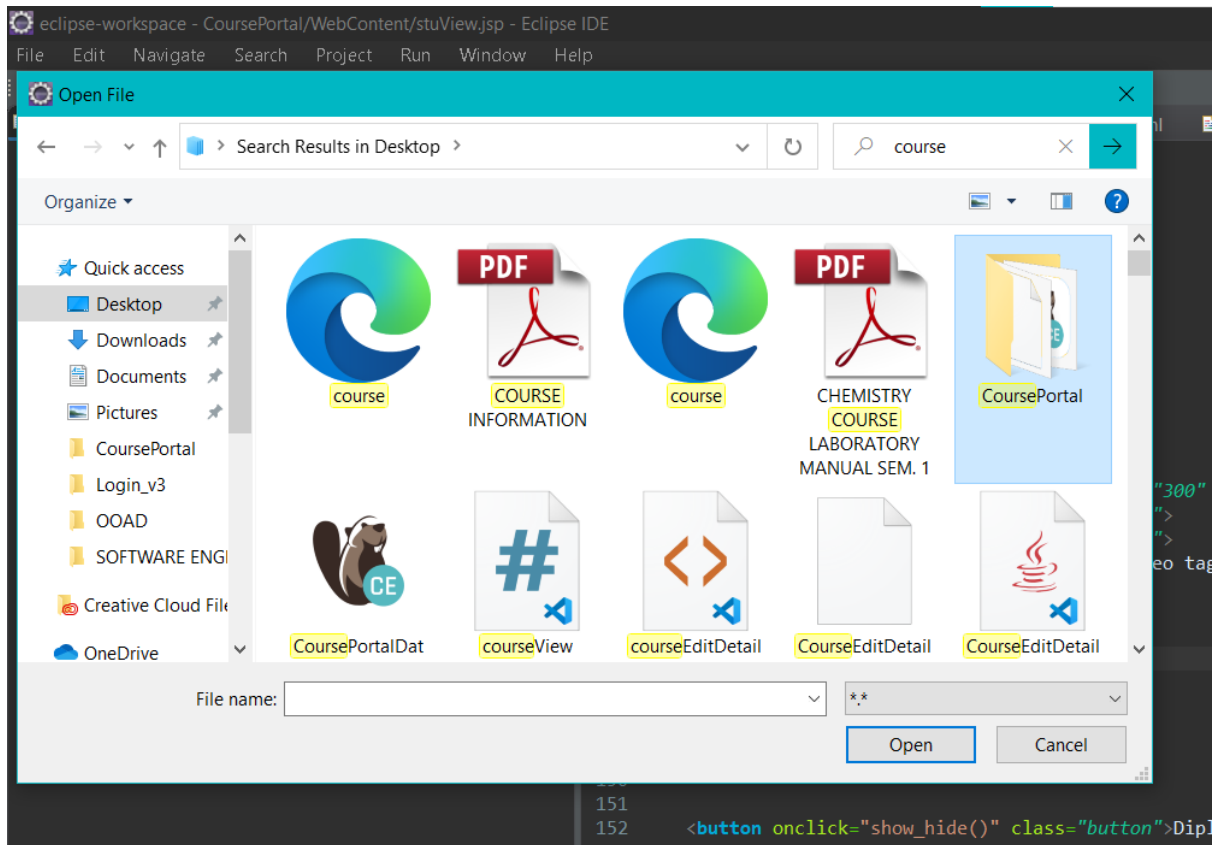

1. Download the online course portal file
2. Open mysql workbench and open sql script from the file downloaded

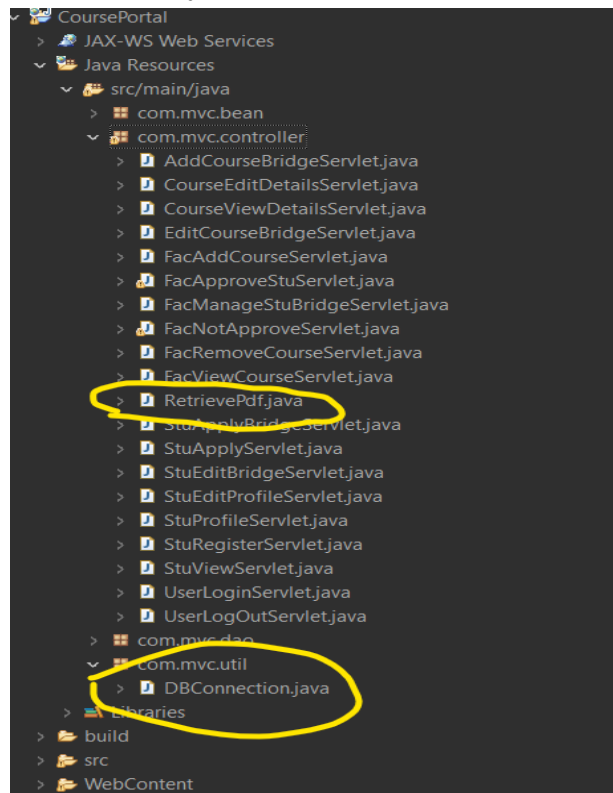

3. Run all the script query from line 1 to 88 function by function.

```
1 •      create database CoursePortal
2
3 ✖      use CoursePortal;
4
5      /*TABLE*/
6 •      CREATE TABLE faculty (
7          faculty_id VARCHAR(50) NOT NULL,
8          faculty_name VARCHAR(50) NOT NULL,
9          faculty_password VARCHAR(50) NOT NULL,
10         email VARCHAR(255) NOT NULL UNIQUE,
11         userType VARCHAR(50) NOT NULL
12     );
13
14 •      CREATE TABLE course (
15         course_id VARCHAR(50) NOT NULL,
16         course_name VARCHAR(255) NOT NULL,
17         faculty_id VARCHAR(50) NOT NULL,
18         course_level VARCHAR(50) NOT NULL,
19         course_password VARCHAR(50) NOT NULL,
20         userType VARCHAR(50) NOT NULL,
```

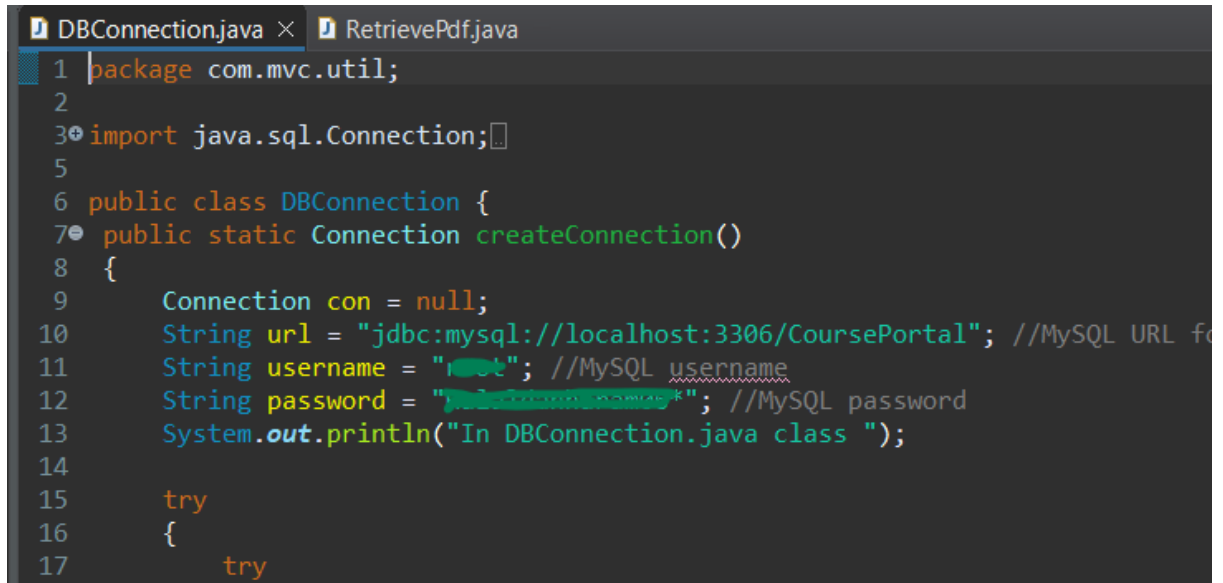

4. Open Eclipse IDE and Import the file downloaded (Files/open Files)

5. Open Files in yellow circle

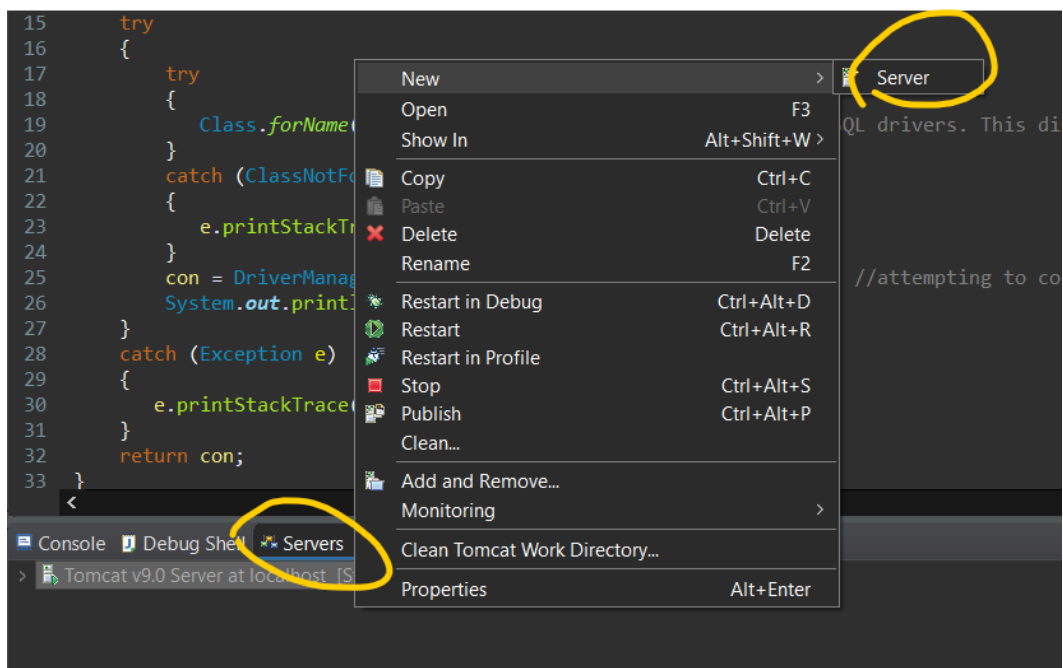

6. Change the username and password at both Files using your mysql username and password

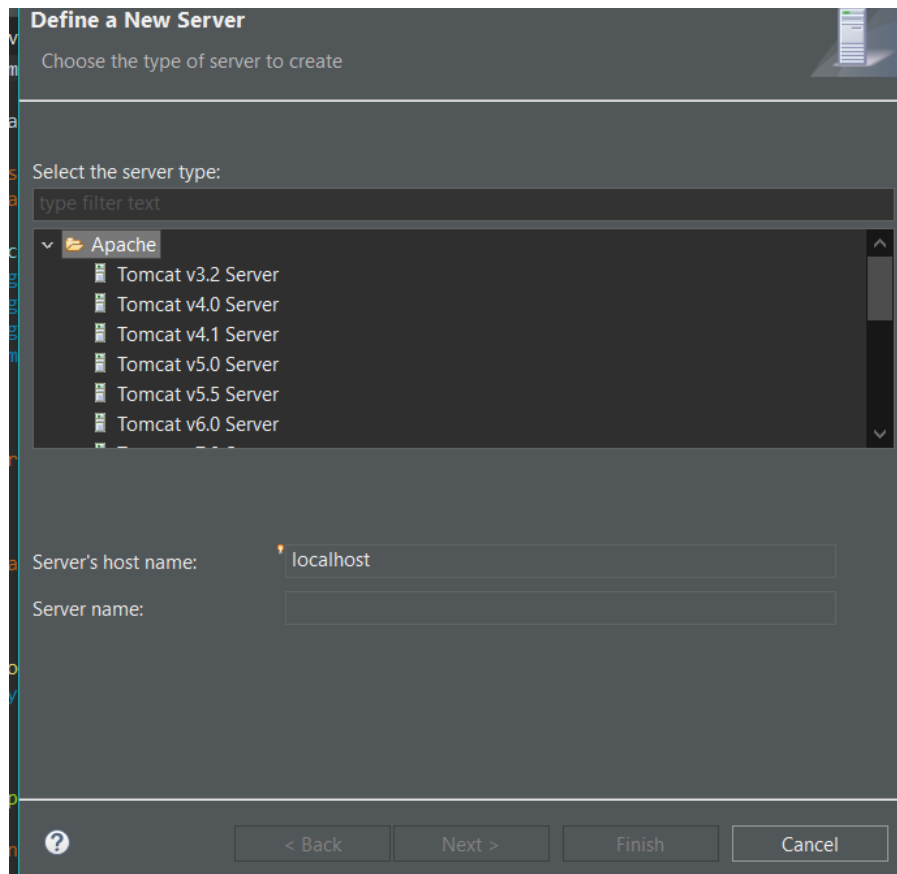

```
1 package com.mvc.util;
2
3 import java.sql.Connection;
4
5
6 public class DBConnection {
7     public static Connection createConnection()
8     {
9         Connection con = null;
10        String url = "jdbc:mysql://localhost:3306/CoursePortal"; //MySQL URL fo
11        String username = "root"; //MySQL username
12        String password = "root"; //MySQL password
13        System.out.println("In DBConnection.java class ");
14
15        try
16        {
17            try
```

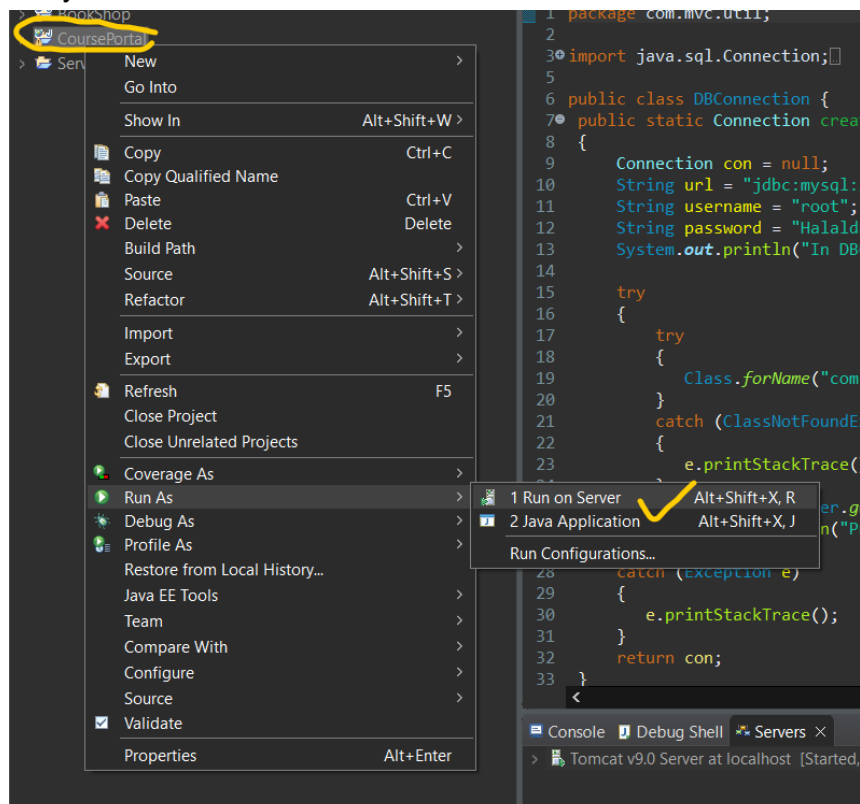

7. Create a server to run this file (right click on server interface and click new server)

8. Choose Apache and search for 9.0 version

9. Lastly, run this file by right clicking the file and choose run on server. Use the server that you created earlier.
